

Blackout? Brownout? Power Out?

In An Emergency, How Do You Keep Your Home Cool in Summer or Warm in Winter?

**How do you keep from freezing in the cold
or sweltering in the heat – with little to no power?**

Most central air conditioner/heat pump units need a huge burst of electricity at start-up, and most backup power sources aren't big enough to start them.

As a result, you freeze in winter or swelter in the heat waiting for the main power to be restored.

THE SOLUTION

Introducing the SoftStartHome™ Soft Starter For Home Power Emergencies

A SoftStart Home soft starter on a central air conditioner/heat pump lets you stay comfortable by allowing the A/C and heat pump to run. How?

**SoftStart Home reduces A/C and heat pump
startup demand by up to 70%!**

It won't MAKE power, but it allows you to START and RUN your cooling or heating with a small generator or battery backup power.

A SoftStartHome soft starter, when installed on a air conditioner or heat pump, works with backup generators, solar-energized battery power, and other auxiliary power systems to operate more devices than previously possible.

In fact, when used in emergencies where people rely on home medical equipment and comfort-controlled environments, **it could be a lifesaver!**

SoftStart Home™ lets you:

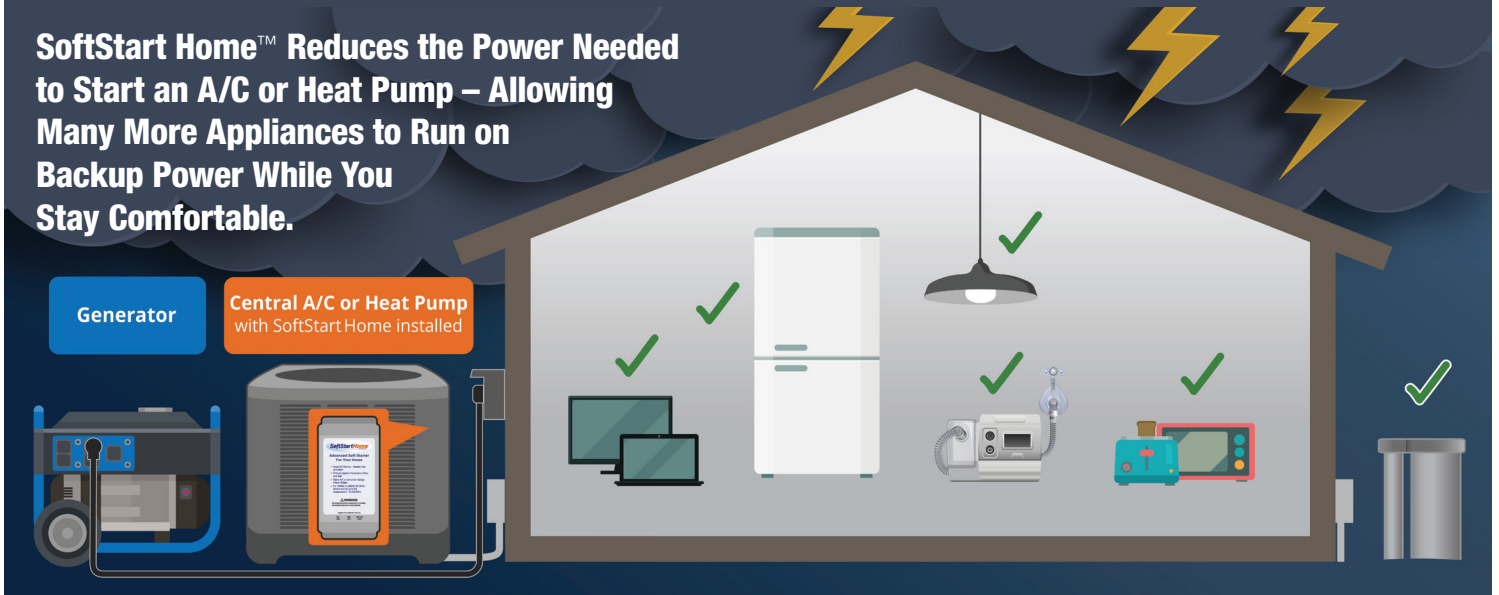

- Keep cool or warm with A/C or heat pump
- Run the refrigerator, freezer, well pump, lights and other vital devices
- Live safely and comfortably until the main power is restored

SoftStartHome™
By SoftStartUSA
High-Performance Soft Starter

KEEPS HOME COMFORT SYSTEMS RUNNING SMOOTHLY – ESPECIALLY IN EMERGENCIES

DURING POWER OUTAGES DUE TO EMERGENCIES OR DISASTERS

SoftStart Home™ Reduces the Power Needed to Start an A/C or Heat Pump – Allowing Many More Appliances to Run on Backup Power While You Stay Comfortable.

BEST-IN-CLASS YEAR-ROUND PERFORMANCE AND SERVICE

Reduces startup power demand by up to 70%. Delivers more efficient cooling and heating startup with main and backup power sources. Helps keep power demand down during peak periods.

No more loud knocks, vibrations or dim lights during startup.
Reduces stress on compressor; extends A/C and heat pump life.

Best warranty in the industry – 3 years with online registration.
Free 90-day trial. Super-easy return policy eliminates hassles.

Compatible with 115V-240V air conditioners worldwide; up to 6 tons (72,000 BTUs).
Works with most residential and commercial A/C and heat pump units.

Quick “No Cut, No Splice” installation – it takes 15-20 minutes.
Free U.S.-based 24/7 technical support; No-Splice, 5-Wire installation, “live” install help through online ticket system and over-the-phone “walk-through” with experienced installers.
